

Table	Title	page
2.1	Literature review of asymmetric hydrogenation reactions of α -ketoesters	11
2.2	Literature review of asymmetric allylation reaction of imines and aldehydes	14
3.1	Information related to sample code, supplier and other information	20
3.2	List of catalysts prepared by the modified similar	22
3.3	List of catalysts prepared by the phase transfer process	23
3.4	Solubility tests of poly 5 carried out at room temperature	23
3.5	List of polyamide and catalysts prepared by interfacial condensation reaction	24
3.6	Surface area and BJH pore size distribution of carbon materials and Pt loaded carbon catalysts	40 43
3.7	Raman results of Pt/carbon materials	
4.1	Optimization of reaction conditions using commercial Pt loaded activated carbon (Pt/AC) for hydrogenation of methyl pyruvate	50 50
4.2	Asymmetric hydrogenation of methyl pyruvate using various catalytic systems	53
4.3	Asymmetric catalytic hydrogenation reaction with Pt HNC/MWCNT	53
4.4	Asymmetric hydrogenation reaction of ethyl 2-oxopropanoate on various Pt HNC/C catalysts	54
4.5	Asymmetric hydrogenation reaction of pyruvate derivative on Pt HNC/MWCNT	57
4.6	Optimization of reaction conditions using catalyst V for asymmetric hydrogenation of ethyl 2-oxo-4-phenylbutanoate	58 61
4.7	Asymmetric hydrogenation of ethyl 2-oxo-4-phenylbutanoate using different catalysts.	
4.8	Chemical shift during interaction of cinchonidine and pyruvate	67
5.1	Detailed information related to sample code, supplier and other information.	68
5.2	Different types of synthesized Imines	70
5.3	Allylation of imines with tributylallyltin using Selectfluor	71
5.4	Allylation of imines with different catalysts
