

List of Tables

<i>Table</i>	<i>Title</i>	<i>Page</i>
3.1	List of several pathophysiological conditions linked to phenylketonuria with detailed metabolic alterations.	14
3.2	List of selected amyloid linked diseases induced by peptide sequences that contains aromatic residues including phenylalanine	15
3.3	Physiological concentration of the blood proteins, their functions and related pathophysiology.	19
3.4	Predicted secondary structures of protein samples before and after aggregation using circular dichroism data. K2D3 online tool was used to theoretically predicting the secondary structures of protein samples.	23
3.5	Percentage hemolysis of RBC's in the presence of different soluble and aggregated samples of proteins.	28
3.6	List of diseases related to deformability of RBC's.	32
4.1	AGGRESKAN 3D score for the aggregation prone amino acid residues in BSA (based on the A3D scoring values).	45
5.1	Reports on multiple medical benefits of piperine	50
5.2	AGGRESKAN 3D score for the aggregation prone amino acid residues in Insulin B chain	57
