Abstract	page
Acknowledgements	i
Contents	iii
List of Figures	v
List of Tables	vii
List of Symbols	viii
List of Abbreviations	xiii
<b>Chapter 1: Introduction</b>	1
1.1 Motivation and Applications	1
1.1.1 Network modeling	1
1.1.2 Structural reconstruction of networks	2
1.1.3 Relation between Diffusion dynamics and network evolution	3
1.2 Thesis overview and Contributions	4
1.2.1 Network Models	4
1.2.2 Diffusion on Networks	6
<b>Chapter 2: Preliminaries and literature survey</b>	9
2.1 Basic definitions	9
2.1.1 Graph theoretic concepts	9
2.2 Dynamics of the networks	11
2.2.1 Network models	11
2.2.2 Structural Network reconstruction	15
2.3 Diffusion processes on networks	16
2.3.1 Agreement protocol	16
2.3.2 Random Walk	16
2.3.3 Susceptible-Infected-Susceptible (SIS) model	17
2.3.4 Network reconstruction using diffusion dynamics	17
<b>Chapter 3: Parametric network generation model: Context dependent preferential attachment</b>	19
3.1 Context dependent preferential attachment model (CDPAM)	20
3.2 Property of complex networks generated by CDPAM	25
3.2.1 Clustering coefficient	26
3.2.2 Assortativity index	26
3.2.3 Number of triangles	28
3.2.4 Algebraic connectivity	28
3.2.5 Spectral radius	29
3.3 Conclusion	29
<b>Chapter 4: Parametric model for signed networks: A 2-layered network formation</b>	33
4.1 The Model	36
4.2 Results	41
4.2.1 Balance in signed network	46
4.3 Discussion and conclusion	49
<b>Chapter 5: Parametric network model inspired by nucleation process</b>	51
5.1 Network approach to crystal formation with single solute	52
5.2 A social network model inspired by nucleation	55
5.2.1 Community structures in the resultant social network	57
5.3 Conclusion	60
<b>Chapter 6: A parametric model approach for structural reconstruction of scale-free networks</b>	61
6.1 Network Reconstruction Model and Network Reconstruction Method	62
6.1.1 Determination of the optimal values of $\beta$ and $p$ for network reconstruction	66
6.1.2 Limitation of NRM	67
6.2 Comparison of NRM with CDPAM, DMS, FFM and CGA model	70
6.2.1 Comparison of NRM, DMS, CDPAM, FFM and CGA using Jensen-Shannon Index	70

6.2.2	<i>Comparison of NRM, DMS, CDPAM, FFM and CGA on the basis of reconstruction of structural and spectral properties</i>	71
6.2.3	<i>Comparison of NRM, DMS, CDPAM, FFM and CGA on the basis of execution time</i>	73
6.3	Properties of Network Reconstruction Model	73
6.3.1	<i>Expected Diameter</i>	73
6.3.2	<i>Expected Number of Triangles and Clustering Coefficient</i>	75
6.3.3	<i>Edge densification and densification power law</i>	76
6.3.4	<i>Properties of NRM by Numerical Simulation</i>	78
6.4	Discussion and future direction	78
6.5	Conclusion	81
<b>Chapter 7: Biased random walk and information diffusion</b>		<b>83</b>
7.1	Background and related work	85
7.2	Biased random walk using property of links	86
7.3	Discontinued truncated biased random walk	90
7.3.1	<i>PageRank and discontinued truncated random walk</i>	95
7.4	Discussion and Conclusion	97
<b>Chapter 8: Diffusion protocols for link failure detection and resource utilization</b>		<b>99</b>
8.1	Related Works	100
8.2	Proposed Protocol for Diffusion on MASs	101
8.2.1	<i>Diffusion on Static Networks</i>	102
8.2.2	<i>Diffusion on Dynamic Networks</i>	107
8.3	Applications	107
8.3.1	<i>Link Failure Detection</i>	108
8.3.2	<i>Security and Utilization of Resources</i>	109
8.3.3	<i>Static Fixed Point Convergence Over a Dynamic Network</i>	110
8.4	Simulations to Validate the Theory of Diffusion Protocols	110
8.4.1	<i>Data</i>	110
8.4.2	<i>Simulated Cases</i>	111
8.4.3	<i>Summary of Observations and Salient Features of the Proposed Diffusion Protocol</i>	117
8.5	Simulations of Applications of Diffusion Protocol	118
8.5.1	<i>Simulation of Diffusion With and Without Link Failures</i>	118
8.5.2	<i>Simulation of Fixed Point Convergence Over the Static and Dynamic Network Structures</i>	119
8.6	Conclusion	121
<b>Chapter 9: Network reconstruction using diffusion dynamics</b>		<b>123</b>
9.1	Methodology of network reconstruction from the given STS data	125
9.2	Performance analysis	128
9.2.1	<i>Network models used for simulation of reconstruction process</i>	129
9.2.2	<i>STS data generation and network reconstruction</i>	130
9.2.3	<i>Efficiency and accuracy of the proposed algorithm</i>	131
9.2.4	<i>How to find out the value of <math>m</math> (number of edges)?</i>	134
9.2.5	<i>Prediction of ordering of edges in a weighted network using STS data</i>	134
9.3	Discussion	135
9.4	Conclusion	136
<b>Chapter 10: Conclusion and Future work</b>		<b>137</b>
<b>References</b>		<b>139</b>
