4.1	Corollaries of Theorem 1. Here $(\mathbb{R}^2, \mathcal{A})$ -SET COVER ($(\mathbb{R}^2, \mathcal{A})$ -SC) is a geometric set cover problem where \mathbb{R}^2 is a set of points in the plane and the covering objects are specified in the first column. The conflict graph for all the problems is \mathcal{G}_d , family of graphs of arboricity d , for some constant d . The entries in the second column give the approximation ratio of the $(\mathbb{R}^2, \mathcal{A})$ -SC problem based on Theorem 1.	38
