Abstract	i
Acknowledgements	iii
Contents	v-vi
List of Figures	vii-viii
List of Tables	ix
List of Symbols	x
List of Abbreviations	xi-xii

## **Chapter 1: INTRODUCTION**

1.1	Purpose of the Study	1-2
1.2	Brief Results and Future Prospects of the Work	2-3

## **Chapter 2: Review of Literature**

2.1	Preview of Gp78: What is History and Structural Properties and How it is Differentially Distributed Within Various Subcellular Locations?	6-8
2.2	Is Gp78 a Promising E3 Ubiquitin Ligase? Optimum Regulation of Different Cellular Functions Under Crucial Conditions	8-9
2.3	Endoplasmic Reticulum Associated Degradation (ERAD) Linked E3 Ubiquitin Ligase Gp78: a Strong Early Defender Against Aberrant Proteins Accumulation	10-11
2.4	Neurobiological Functions of Gp78: Impairment may Lead to Protein Aggregation and Neurodegeneration	11-12
2.5	The Multiple Roles of Gp78 in Cellular Proliferation: Novel Insights Into Complex Diseases	13-15
2.6	Hidden Promising Therapeutic Interventions of Gp78 in Protein Conformational Disorders	15-17
2.7	Flavonoids, Natural Plant Products With Multiple Benefits	17-18
2.8	Myricetin: Structure, Functions and Future Therapeutic Prospects	18-19

## **Chapter 3: GP78 Involvement in Cellular Proliferation: Can Act as A Promising Modulator of Cell Cycle Regulatory Proteins**

3.1	Results	23-44
	3.1.1 Gp78 Overexpression Elevates Levels of p27 in Cells	23-26
	3.1.2 Upregulation of p27 Protein Level in Gp78 Overexpressed Cells	26-30
	3.1.3 Gp78 Overexpression Exhibits Massive Accumulation of p27-Positive Inclusion-Like Structures in Cells	31-33
	3.1.4 Exogenous Expression of Gp78 Increases Stability of p27 in Cells	33-35
	3.1.5 Overexpression and Knockdown of Gp78 Affects Cellular Proliferation and Apoptosis	35-38
	3.1.6 Gp78-Mediated p27 Elevation Might be Involved in the Upregulation of CDK4, CyclinD1, and cyclin E	38-40
	3.1.7 Knockdown of Gp78 Does Not Affect the Endogenous Levels of p27 in Cells	40-42
	3.1.8 Cellular Stress Enhances the Endogenous Levels of Gp78 and p27 in Cells	42-44
3.2	Discussion	44-45
3.3	Concluding Remarks	45

## **Chapter 4: Myricetin-Assisted Proteasomal Degradation Suppresses Misfolded Proteins Aggregation and Cytotoxicity**

4.1	Results	47-65
	4.1.1 Myricetin Treatment Enhances the Endogenous Levels of Protein Quality Control Components	47-49
	4.1.2 Exposure of Myricetin Suppresses the Aggregation of Misfolded Proteins	49-51
	4.1.3 Myricetin Reduces Aggregation of Misfolded Luciferase Proteins and Protects Stress-Induced Cell Death	52-54
	4.1.4 Aggregation Inhibitory Effects of Myricetin on Intracellular Mutant SOD-1 Inclusions	54-56
	4.1.5 Inhibition of Mutant $\alpha$ -Synuclein Intracellular Aggregation by Myricetin	56-58
	4.1.6 Myricetin enhances the stability of E3 Ubiquitin Ligase E6-AP	58-60
	4.1.7 Myricetin Reduces the Formation of Insoluble Expanded Polyglutamine Proteins Inclusion	60-62

	<i>Bodies</i>	
	4.1.8 <i>Effect of Myricetin on Different Cellular Models of Neurodegenerative Diseases</i>	62-65
4.2	Discussion	65-66
4.3	Concluding Remarks	67
<b>Chapter 5: Summary and Conclusion</b>		<b>69</b>
<b>Annexure A: Materials and Methods</b>		
A.1	Materials	71-72
	A.1.1 <i>Cell Lines</i>	72
A.2	Methods	72-75
	A.2.1 <i>Plasmid Isolation</i>	72
	A.2.2 <i>Cell Culture, Transfection and Treatment</i>	72
	A.2.3 <i>Immunoblotting and Cycloheximide Chase</i>	72-73
	A.2.4 <i>Protein Estimation, Agarose Gels and Immunoblots Quantification</i>	73
	A.2.5 <i>Reporter Gene Assay and Docking Studies</i>	73
	A.2.6 <i>Bright Field Images, Immunofluorescence Staining and Aggregate Counting</i>	73
	A.2.7 <i>Reverse Transcriptase Polymerase Chain Reaction Analysis</i>	73-74
	A.2.8 <i>Statistical Analysis</i>	74
	A.2.9 <i>TUNEL Staining</i>	74
	A.2.10 <i>Knockdown Experiments</i>	74
	A.2.11 <i>Filter Trap Assay</i>	74
	References	77-88
