Contents	iii
List of Figures	v-vi
List of Tables	vii-viii
List of Symbols	ix
List of Abbreviations	x
	xi-xii

Chapter 1: INTRODUCTION

1.1	Purpose of the Study	1
1.2	An Outline of the Results and Future Perspectives of the Present Work	2
	1.2.1 Lanosterol Suppresses the Aggregation and Cytotoxicity of Misfolded Proteins Linked with Neurodegenerative Diseases	2
	1.2.2 Ibuprofen Induces Mitochondrial-Mediated Apoptosis through Proteasomal Dysfunction	3

Chapter 2: Review of Literature

2.1	A Glimpse of Cellular Protein Quality Control Systems	5-10
	2.1.1 Molecular chaperones	6
	2.1.2 Cellular Proteolytic Machinery: Ubiquitin proteasome system and Autophagy	6
2.2	Deficiency of Cellular Quality Control and Pathological Conditions	10
2.3	Characteristics of Amyloidic Aggregates and Inclusion bodies	11
	2.3.1 Unique Structural Properties of Amyloids	12
2.4	Cellular Protein Quality Control Pathways and a Possible Linkage between Neurodegeneration and Cancer	13
2.5	Modulating Protein Quality Control Pathways for Therapeutic Purposes	14-18
	2.5.1 Methods to Suppress Amyloid Formation	15
	2.5.2 Small Molecules	17
2.6	Concluding Remarks	18

Chapter 3: Lanosterol Suppresses the Aggregation and Cytotoxicity of Misfolded Proteins Linked with Neurodegenerative Diseases

3.1	Results	21-44
	3.1.1 Lanosterol Induces Protective Autophagy and Upregulation of Endogenous Co-Chaperone CHIP Expression in Cells	21
	3.1.2 Lanosterol Prevents Cytoplasmic Aggregation of Mutant Bona-fide Misfolded Proteins in Cells	24
	3.1.3 Lanosterol Enhances the Degradation of Heat-Denatured Luciferase	27
	3.1.4 Effects of Lanosterol on Neurodegenerative Disease-Linked Proteins	29
	3.1.5 Lanosterol Increases the Stability of Co-Chaperone CHIP	33
	3.1.6 Lanosterol Diminishes Aggregation of Expanded Polyglutamine Proteins in Cells	35
	3.1.7 Lanosterol Rescues Stress-Induced Cell Death and Suppresses Aggregation of Deleterious Intracellular Protein Aggregation	40
3.2	Discussion	42
3.3	Concluding Remarks	44

Chapter 4: Ibuprofen Induces Mitochondrial-Mediated Apoptosis through Proteasomal Dysfunction

4.1	Results	47-67
	4.1.1 Ibuprofen Treatment Causes Accumulation of Ubiquitylated Proteins and Induces Time-Dependent Morphological Apoptotic Changes	47
	4.1.2 Treatment of Ibuprofen Disturbs Proteasomal Function and Induces Rapid Accumulation of Misfolded Proteins	50
	4.1.3 Ibuprofen-Mediated Interference Can Contribute in Proteasomal Inhibition-Induced	55

Cytotoxicity	
4.1.4 Ibuprofen Induces Proteasomal Dysfunction, Facilitates Formation of Inclusions of Misfolded Proteins, and Elevates Aggregation of Proteasomal Substrates	57
4.1.5 Ibuprofen Compromises the Clearance of Pro-Apoptotic Ubiquitinated Proteins Destined for Proteasomal Degradation	59
4.1.6 Ibuprofen-Mediated Proteasomal Disturbance Triggers Chromatin Condensation, Nuclear Disassembly, and DNA Fragmentation and Activates Cell Death Program	61
4.1.7 Ibuprofen Induces Loss of Mitochondrial Membrane Potential and Release of Cytochrome c	63
4.2 Discussion	65
4.3 Concluding Remarks	67
Chapter 5: Summary and Conclusion	
5.1 Summary	69
5.2 Conclusion	69
5.3 Closing comments	70
Annexure A: Materials and Methods	
A.1 Materials	73--74
A.1.1 Cell Lines	74
A.2 Methods	74-77
A.2.1 Large Scale Plasmid Extraction	74
A.2.2 Cell Culture, Transfection, and Drug Treatments	74
A.2.3 Cell Viability Assay	75
A.2.4 SDS-PAGE and Immunoblotting	75
A.2.5 Cycloheximide Chase Experiment	75
A.2.6 Immunofluorescence Techniques and Counting of Aggregates	75
A.2.7 Reverse Transcriptase PCR Analysis, Quantitative Real-Time RT-PCR Analysis	75
A.2.8 Proteasome Assay	76
A.2.9 Flow Cytometry Analysis	76
A.2.10 Molecular Docking Studies	76
A.2.11 JC-1 Staining	76
A.2.12 Reporter Gene Assay and Statistical Analyses	77
A.2.13 TUNEL Assay and Filter Trap Assay	77
A.2.14 Extraction of Genomic DNA and Agarose Gel Electrophoresis	77
References	79-95
