<b>Abstract</b>	<b>vii</b>
<b>Acknowledgment</b>	<b>ix</b>
<b>1 Introduction</b>	<b>1</b>
<b>2 Fundamental Concepts of Quantum Communication</b>	<b>5</b>
2.1 Introduction . . . . .	5
2.1.1 Photons as quantum information carriers . . . . .	5
2.1.2 The Pauli matrices . . . . .	7
2.1.3 Principles of Quantum Mechanics . . . . .	7
2.1.4 Quantum Measurement . . . . .	8
2.1.5 Kraus Operators . . . . .	9
2.1.6 Entanglement . . . . .	10
2.1.7 CHSH inequality . . . . .	11
2.1.8 The no-cloning theorem . . . . .	12
2.1.9 Shannon entropy . . . . .	13
2.2 Quantum cryptography . . . . .	14
2.2.1 BB84 QKD protocol . . . . .	14
2.2.2 SARG04 Protocol . . . . .	17
2.2.3 Quantum Bit Error Ratio . . . . .	17
2.2.4 Specific attacks in quantum communication . . . . .	18
2.3 Quantum based satellite communication . . . . .	19
2.4 Effect of background noise on Quantum Key Distribution . . . . .	20
2.4.1 Time-gate filters . . . . .	20
2.4.2 Frequency Filter . . . . .	20
2.4.3 Selection of spatial filters . . . . .	21
2.4.4 Precision in ATP system . . . . .	21
2.4.5 Atmospheric Turbulence . . . . .	21
2.4.6 Effect of background light . . . . .	22
2.5 Effect of the atmosphere on system efficiencies . . . . .	22
2.5.1 Free space propagation . . . . .	24
2.5.2 Scattering and Absorption . . . . .	25
<b>3 Controlled bidirectional remote state preparation in noisy environment: A generalized view</b>	<b>27</b>
3.1 Introduction . . . . .	27
3.2 Probabilistic controlled bidirectional remote state preparation . . . . .	31
3.3 Deterministic controlled bidirectional remote state preparation . . . . .	34
3.4 Deterministic controlled joint bidirectional remote state preparation . . . . .	35
3.5 Effect of the amplitude-damping noise and the phase-damping noise on the CBRSP process . . . . .	38
3.6 Possibilities of experimental realization of the proposed schemes . . . . .	43

3.7	Bidirectional quantum controlled teleportation with error correction technique . . .	44
3.8	Conclusions . . . . .	47
<b>4</b>	<b>A comparative study of protocols for secure quantum communication under noisy environment: single-qubit-based protocols versus entangled-state-based protocols</b>	<b>51</b>
4.1	Introduction . . . . .	51
4.2	Different noise models . . . . .	54
4.2.1	AD noise model . . . . .	54
4.2.2	PD noise model . . . . .	54
4.2.3	Collective noises . . . . .	55
4.2.4	Pauli noise . . . . .	55
4.2.5	SGAD noise model . . . . .	56
4.3	Strategy for studying the effect of various noise models on the protocols of secure quantum communication . . . . .	56
4.4	Various aspects (protocols) of secure quantum communication and effect of noise on them . . . . .	57
4.4.1	QKD protocols and effect of noise on them . . . . .	57
4.4.2	QKA protocols and effect of noise on them . . . . .	63
4.4.3	QSDC protocols and effect of noise on them . . . . .	67
4.4.4	Quantum dialogue protocols and effect of noise on them . . . . .	73
4.5	Conclusion . . . . .	78
<b>5</b>	<b>Decoherence can help quantum cryptographic security</b>	<b>83</b>
5.1	Introduction . . . . .	83
5.2	Eavesdropping on the Ping-Pong protocol . . . . .	85
5.3	Quantum communication under a noisy environment . . . . .	86
5.3.1	Amplitude-Damping Noise . . . . .	87
5.3.2	Depolarizing noise . . . . .	90
5.4	Conclusion and discussions . . . . .	93
<b>6</b>	<b>Analysis of atmospheric effects on satellite based quantum communication: A comparative study</b>	<b>95</b>
6.1	Introduction . . . . .	95
6.2	Methodology for FSO Links under various atmospheric conditions . . . . .	100
6.3	THE SECURE KEY RATE ANALYSIS WITH DIFFERENT PROTOCOLS . . . . .	102
6.3.1	The BB84 protocol . . . . .	102
6.3.2	The SARG04 Protocol . . . . .	103
6.3.3	Protocols with the decoy-states: An effective approach to counter Eavesdropping . . . . .	104
6.4	Results . . . . .	107
6.5	Conclusion . . . . .	112
<b>7</b>	<b>Conclusions</b>	<b>115</b>
