List of Tables

Table	*Title*	*page*
4.1	Performance accuracy of posture specific HMM	43
4.2	Comparison of segmentation accuracy of concatenated HMM with traditional Viterbi and the proposed Viterbi Algorithm	43
4.3	Performance accuracy of assessment framework in detecting jerks and inconsistent segments	43
5.1	Performance accuracy for missed action notification (under tolerance of 25 frames)	51
5.2	Performance accuracy for anomalous action notification (under tolerance of 25 frames)	51
5.3	Number of Edit Operations of different test sequences with 5 templates of same expert	51
6.1	Comparison of Rank Correlation and Mean Square Error of various techniques for Sun Salutation performance scoring	59
7.1	Segmentation Accuracy : Community based approach outperforms even without knowledge of no. of actions	69
7.2	Comparison of Rank Correlation and Mean Square Error of various techniques for Sun Salutation action scoring with Community Detection based encoding	70
7.3	Segmentation results : Sun Salutation video segmentation in the presence of incorrect performances	71
8.1	Data Splits. P: Positive pairs, N: Negative Pairs	81
8.2	UNLV Diving Results - Comparison of Rank Correlation; C:C3D, L:LSTM, F: Final, I: Incremental, S: SVR. Dataset splits are as described in Section 8.5(A).	83
8.3	UNLV Diving Results - Comparison of Mean Square Error; C:C3D, L:LSTM, F: Final, I: Incremental, S: SVR.	83
8.4	Results of our model in comparison to the baseline works for various dive types. Dive-type specific results are averaged over the splits described in Section 8.5(A)	83
8.5	UNLV Gymnastic Vaults - Comparison of Rank Correlation and Mean Square Error; C:C3D, L:LSTM, F: Final, I: Incremental, S: SVR, RGR: Reference Guided Regression	84
8.6	Multitask AQA Dataset - Comparison of Rank Correlation and Mean Square Error; C:C3D, L:LSTM, F: Final, I: Incremental, S: SVR, RGR: Reference Guided Regression	84
8.7	Impact of Metric Learning on final scoring	86
8.8	Architecture variations	86
8.9	Clip Level contribution to the final score	88
8.10	Performance of feedback module on original videos and when the videos are misaligned; RGR_sX denotes the reference guided regression performed when we shift the candidate videos with X frames to create misalignments	89
8.11	Performance comparison our model with D2 embedding generated by including worst bias (WB), bias from performer of 50 and 75 percentile and expert bias (EB)	89
8.12	Runtime of different methods	91
