Abstract xi

1 Introduction 1

1.1 Introduction . . . 1
1.2 Quantum theory of radiation field . . . 4
1.2.1 Creation and annihilation operator . . . 5
1.2.2 Some more quantum operators of relevance . . . 7
(a) Displacement operator . . . 8
(b) Squeezing operator . . . 8
1.2.3 Eigen states of the field operators . . . 8
(a) Fock state: Eigen state of the number operator . . . 8
(b) Coherent state: Eigen state of the annihilation operator . . . 9
1.3 Quantum states of our interest . . . 10
1.3.1 Displaced Fock state . . . 10
1.3.2 Photon added and photon subtracted displaced Fock state . . . 10
1.3.3 Photon added then subtracted displaced Fock state . . . 11
1.3.4 Even coherent state and states generated by holeburning on it . . . 11
(a) Vacuum filtered even coherent state . . . 12
(b) Photon added even coherent state . . . 12
1.3.5 Binomial state and the states generated by holeburning on it . . . 12
(a) Vacuum filtered binomial state . . . 13
(b) Photon added binomial state . . . 13
1.3.6 Kerr state and the states generated by holeburning on it . . . 13
(a) Vacuum filtered Kerr state . . . 13
(b) Photon added Kerr state . . . 14
1.4 The notion of nonclassical states . . . 14
1.5 Nonclassical states: witnesses and measures . . . 14
1.5.1 Witnesses of nonclassicality . . . 15
(a) Lower- and higher-order antibunching . . . 15
(b) Lower- and higher-order sub-Poissionian photon statistics . . . 16
(c) Higher-order squeezing . . . 16
(d) Klyshko's criterion . . . 16
(e) Vogel's criterion . . . 17
(f) Agarwal-Tara's criterion . . . 17
(g) Mandel Q_M parameter . . . 17
1.5.2 Other quasiprobability distributions . . . 18
(a) Q function . . . 18

(b) Wigner function . . . 18
1.5.3 Measures of nonclassicality . . . 18
(a) Linear entropy . . . 19
1.6 Analytic tools for the study of phase properties of nonclassical states . . . 19
1.6.1 Phase distribution function . . . 19
1.6.2 Phase dispersion . . . 19
1.6.3 Angular Q function . . . 20
1.6.4 Phase fluctuation . . . 20
1.6.5 Quantum phase estimation parameter . . . 21
1.7 Structure of the rest of the thesis . . . 22

2 Lower-and higher-order nonclassical properties of photon added and subtracted displaced Fock state 23
2.1 Introduction . . . 23
2.2 Higher-order moment for PADFS and PSDFS . . . 25
2.3 Nonclassical features of PADFS and PSDFS . . . 26
2.3.1 Mandel Q_M Parameter . . . 26
2.3.2 Lower- and higher-order antibunching . . . 27
2.3.3 Higher-order sub-Poissonian photon statistics . . . 29
2.3.4 Higher-order squeezing . . . 31
2.3.5 Q function . . . 32
2.3.6 Agarwal-Tara's criterion . . . 32
2.3.7 Klyshko's Criterion . . . 34
2.4 Conclusions . . . 35

3 Quantum phase properties of photon added and subtracted displaced Fock states 37
3.1 Introduction . . . 37
3.2 Quantum phase distribution and other phase properties . . . 38
3.3 Phase properties of PADFS and PSDFS . . . 38
3.3.1 Phase distribution function . . . 39
3.3.2 Angular Q function of PADFS and PSDFS . . . 42
3.3.3 Quantum phase fluctuation of PADFS and PSDFS . . . 42
3.3.4 Phase Dispersion . . . 44
3.3.5 Phase sensing uncertainity for PADFS and PSDFS . . . 46
3.4 Conclusions . . . 47

4 Impact of photon addition and subtraction on nonclassical and phase properties of a displaced Fock state 49
4.1 Introduction . . . 49
4.2 Moments of the field operators for the quantum states of our interest . . . 50
4.3 Nonclassicality witnesses and the nonclassical features of PASDFS witnessed through those criteria . . . 50
4.3.1 Lower- and higher-order antibunching . . . 51
4.3.2 Higher-order sub-Poissonian photon statistics . . . 51
4.3.3 Lower- and higher-order squeezing . . . 51
4.3.4 Klyshko's Criterion . . . 52
4.3.5 Agarwal-Tara's criterion . . . 52
4.3.6 Vogel's criterion . . . 52

4.4 Phase properties of PASDFS . . . 53
4.4.1 Phase distribution function . . . 53
4.4.2 Phase Fluctuation . . . 56
4.5 Quasidistribution function: Q function . . . 57
4.6 Conclusions . . . 57

5 Manipulating nonclassicality via quantum state engineering processes: Vacuum filtration and single photon addition 61
5.1 Introduction . . . 61
5.2 Quantum states of interest . . . 63
5.2.1 Expressions for moments of annihilation and creation operators . . . 63
(a) Expectation values for even coherent states and the corresponding engineered states . . . 63
(b) Expectation values for binomial state and the corresponding engineered states . . . 64
(c) Expectation values for Kerr state and the corresponding engineered states . . . 64
5.3 Nonclassicality witnesses . . . 65
5.3.1 Lower- and higher-order antibunching . . . 65
5.3.2 Lower- and higher-order squeezing . . . 65
5.3.3 Higher-order sub-Poissonian photon statistics . . . 67
5.4 Nonclassicality measure . . . 68
5.5 Conclusion . . . 71

6 Conclusions And Scope For Future Work 73
6.1 Conclusion . . . 73
6.2 Scope for future work . . . 74
