Chapter 1: Introduction		
1.1	Overview	1-3
1.2	Organization of the Thesis	4-5
Chapter 2: Literature Review		
2.1	Need of HSLA Steel In pipeline industry	6
2.2	Weldability of pipeline steel	6
2.3	Physicochemical behavior of submerged arc welding fluxes	7-9
2.4	Effect of flux composition on mechanical and microstructural behavior of pipeline steel welds	9-10
2.5	Effect of welding process parameters on mechanical properties and chemical composition of steel welds	10-11
2.6	Effect of slag-metal reactions in submerged arc welding	11
2.7	Effect of micro-alloying constituents on mechanical and microstructural behavior of weld metal	12-13
2.8	Effect of cooling rate on the mechanical and microstructure behavior of pipeline steel & pipeline weld	14
2.9	Effect of submerged arc welding fluxes on diffusible hydrogen content and hydrogen induced cracking in welds	15-16
2.10	Literature on flux formulation design	16-18
2.11	Identification of gaps from literature	18-19
Chapter 3 Problem Formulation		
3.1	Formulation of problem	20
3.1	Gaps in the study and Objective of the Study	20
3.2	Experimental Plan	21
Chapter 4: Experimentation Detail		
4.1	Design of experimentation for flux formulation	22-24
	4.1.1 Selection of welding process parameters	24-31
4.2	Submerged arc welding flux preparation	31-32
4.3	Physicochemical and thermophysical characterization of SAW fluxes (For three flux systems)	32
	4.3.1 Density measurement of fluxes	32
	4.3.2 Grain finesses number (GFN) calculation	32
	4.3.3 Weight loss and Change in enthalpy measurement	32
	4.3.4 Thermal properties (e.g. thermal conductivity, thermal diffusivity and specific heat) measurement	33
	4.3.5 Contact angle and surface tension measurements	33-34
	4.3.6 Phase analysis of submerged arc fluxes	35
	4.3.7 Structural analysis of submerged arc fluxes	35
4.4	Multi-pass bead on plate weld deposits experimentation using SAW fluxes	35
	4.4.1 Multi-pass bead on plate experimentation for three flux system	35-36
	4.4.2 Chemical analysis of beads for three flux systems	36
	4.4.3 Average Grain size and microhardness measurements of beads	36
	4.4.4 Selection of adequate flux by qualitatively analysing multi-pass weld deposits for three flux systems	36

4.5	Material and Experimental setup	36-38
4.6	Submerged arc welding and various characterizations using adequate fluxes for three flux systems	38
	4.6.1 Weld coupon preparation	38
	4.6.2 Submerged arc welding of plates	38-39
	4.6.3 Cutting of weld specimens	39
	4.6.4 Mechanical characterization of weld samples	40
	4.6.4.1 Tensile testing of weld specimens	40
	4.6.4.2 Impact testing of weld specimens	40
	4.6.4.3 Microhardness testing of welds specimens	41
	4.6.5 Microstructural analysis of weld specimens	41
	4.6.6 Hydrogen induced cracking measurement of weld specimens	41-42
4.7	Corrosion analysis of heat treated X70 steel and weld specimen in different exposing environment	42
	4.7.1 Specimen preparation	42
	4.7.2 Heat treatment method for weight loss study	42-43
	4.7.3 Linear sweep voltammetry technique for weld joint corrosion study	43
Chapter 5 Results and Discussion		
5.1	Optimization of physicochemical and thermophysical properties	44
	5.1.1 Development and analysis of physicochemical and thermophysical responses for fluxes	44
	5.1.1.1 Regression model of density, grain finesses number, weight loss, change in enthalpy, thermal conductivity, thermal diffusivity and specific heat for three flux systems	44-46
	5.1.1.2 Analysis of variance for density grain finesses number, weight loss, change in enthalpy, thermal conductivity, thermal diffusivity and specific heat for three flux systems	46-66
	5.1.1.3 Discussion of regression analysis of SAW flux components (Individual, binary and ternary) on grain finesses number, density, weight change, change in enthalpy, thermal conductivity, thermal diffusivity and specific heat for three systems	67-71
	5.1.1.4 Contour plots of physicochemical and thermophysical properties for three flux systems	71-75
	5.1.1.5 Optimization of physicochemical and thermophysical properties	75-78
	5.1.1.6 Discussion of contact angle & surface tension properties	78
	5.1.1.6.1 Influence of TiO_2/SiO_2 , TiO_2/MgO & TiO_2/Al_2O_3 flux ratios on the measured contact angle	78-79
	5.1.1.6.2 Influence of TiO_2/SiO_2 , TiO_2/MgO & TiO_2/Al_2O_3 flux ratios on the surface tension properties	79-80
	5.1.1.6.3 Influence of TiO_2/SiO_2 , TiO_2/MgO & TiO_2/Al_2O_3 flux ratios on the work of adhesion	80-81
	5.1.1.7 Phase analysis of flux constituents for three flux systems	81-82
	5.1.1.8 Structural analysis of flux constituents for three flux systems	83
5.2	Multi-pass bead on plate experimentation for three flux systems	84
	5.2.1 Bead profile analysis	84
	5.2.2 Optimization of grain size, bead chemistry and microhardness during multi-pass weld deposits for three flux systems	85
	5.2.2.1 Analysis of grain size, bead chemistry and microhardness for SAW multi-pass weld deposits	85

	5.2.2.1.1 Regression model of grain size, bead chemistry and microhardness for three flux system	85-88
	5.2.2.1.2 Analysis of variance for grain size, bead chemistry and microhardness for three flux system	89-108
	5.2.2.1.3 Discussion of regression analysis of flux components on grain size, bead chemistry and microhardness for three flux systems	109-111
	5.2.2.1.4 Contour plots of grain size, bead chemistry and microhardness for three flux systems	111-116
	5.2.2.1.5 Optimization of grain size, bead chemistry and microhardness for three flux systems	116-119
5.3	Corrosion analysis and discussion	119
	5.3.1 Corrosion study of heat treated API X70 steel due to weight loss in different environments	119-125
	5.3.2 Mechanical properties of heat treated API X70 steel in different environments	126-130
	5.3.3 Electrochemical corrosion study and of heat treated specimens in different environments	130-134
5.4	Selection of flux (From three flux systems)	134
	5.4.1 Selection of suitable fluxes from three flux systems	134
	5.4.2 Chemical analysis of weld specimens	134-137
	5.4.3 Microhardness and microstructure evaluation of weld specimens	137-143
	5.4.4 Impact testing of weld and HAZ specimens at room temperature & -65 °C	143-145
	5.4.5 Tensile testing of weld specimens	145-147
	5.4.6 Hydrogen induced cracking of welds specimens	147-150
	5.4.7 Electrochemical corrosion study of welds in different environments	150-153
Chapter 6 conclusion and Future Scope		
6.1	Conclusion	154-160
6.2	Future Scope	160
Annexure		
	Appendix 1	161-164
