

## List of Figures

Figures	Title	page
2.1	Prediction for the depletion of fossil fuels	5
2.2	Definition of sustainability	6
2.3	Generations of biodiesel	7
2.4	Transesterification of lipids	8
2.5	Applications of the microbial lipids	15
2.6	TAG Biosynthesis in oleaginous yeasts	19
2.7	Factors affecting lipogenesis	20
2.8	Flow chart of the steps involved in biodiesel production using oleaginous yeast	25
3.1	Schematic of the isolation and characterization studies of <i>Cystobasidium oligophagum</i> JRC1	35
3.2	The phylogenetic tree of <i>C. oligophagum</i> JRC1: Constructed by neighbour-joining method	36
3.3	Scanning electron microscopy (SEM) image of <i>C. oligophagum</i> JRC1	37
3.4	Cellulase activity profile of <i>C. oligophagum</i> JRC1 with time	38
3.5	Lipase activity profile of <i>C. oligophagum</i> JRC1 with time	39
3.6	Lipid production from <i>C. oligophagum</i> JRC1	40
3.7	Effect of carbon sources on lipid accumulation	44
3.8	FT-IR analysis for lipid extract of <i>C. oligophagum</i> JRC1	46
4.1	The schematic of the study	50
4.2	Lipid production with time on Deproteinized cheese whey (DCW)	53
4.3	Lipid production with time on Untreated Cheese Whey (UCW)	54
4.4	Change in sCOD with time for DCW and UCW	56
4.5	FT-IR spectra recorded for the lipid extracts obtained from yeast cultivated in DCW and UCW	58
4.6	Proton NMR spectra recorded for the lipid extracts obtained from yeast cultivated in DCW and UCW	59
4.7	FAME compositions obtained by GC-FID analysis	61
5.1	Summary of the work	66
5.2	Effect of 5-HMF on the reducing sugar uptake and cellular growth	68
5.3	Effect of Furfural on reducing sugar uptake and cellular growth	69
5.4	Effect of Acetic acid on the reducing sugar uptake and cellular growth	70
5.5	Effect of Mixed inhibitors on the reducing sugar uptake and cellular growth	71
5.6	TLC analysis of the lipid extracts	74
5.7	<sup>1</sup> H NMR of lipid extracts from the inhibitors growth conditions and lignocellulosic hydrolysates	75
