List of Figures	v
List of Symbols	vii
	ix
Chapter 1: Introduction	1
Chapter 2: Period tripling and quintupling renormalizations of unimodal maps below C^2 smoothness	11
2.1 Period tripling renormalization	12
2.1.1 Piece-wise affine renormalizable maps	12
2.1.2 C^{1+Lip} extension of f_{s^*}	20
2.1.3 Topological entropy of renormalization	22
2.1.4 An ε -variation of the scaling data	23
2.2 Period quintupling renormalization	28
2.3 Period quadrupling renormalization	35
Chapter 3: Renormalization of symmetric bimodal maps with low smoothness	43
3.1 Piece-wise affine renormalizable maps	44
3.1.1 Renormalization on $I_L = [0, b_c(0)]$	48
3.1.2 Renormalization on $I_R = [b_c(1), 1]$	52
3.2 C^{1+Lip} extension of f_{s^*}	56
3.3 Topological entropy of renormalization	59
3.4 Non-rigidity of renormalization	60
Chapter 4: Pairwise period doubling renormalization of symmetric bimodal maps	63
4.1 Construction of piece-wise affine renormalizable maps	64
4.1.1 Left sided renormalization operator R^l on left branch I_L	66
4.1.2 Right sided renormalization operator R^r on right branch I_R	70
4.2 Extension of f_{s^*} to a C^{1+Lip} symmetric bimodal map	72
4.3 Topological entropy of renormalization operator	75
4.4 Continuum of fixed points of renormalization	75
Chapter 5: Summary and future scope	79
5.1 Summary	79
5.2 Future scope	80
References	81
Appendix A: List of publications	85
Appendix B: Mathematica programs for calculating the fixed point of the map \mathcal{R} defined on feasible domain	87
